

Transparent Map Template

The transparency map template is available as a reference aid, especially for mass production of various maps. Printed on transparency film, the template allows you to compare your map to a standard Installation Special. All fonts, spacing, titles, and notes displayed on the transparent map template reflect the output produced by the MIMTs and the Installation Special template. Print the template on media at least 22 x 31 inches for accurate comparisons. Please contact the Regional Support Centers regarding template questions or refer to the help section of the MIMT.
